

WHAT IS CLAIMED IS:

1. A low fire-spreading cigarette comprising a tobacco section including a columnar tobacco filler material, an inside wrapper paper sheer wrapping an outer circumferential surface of the columnar tobacco filler material, and an outside wrapper paper sheet wrapping an outer circumferential surface of the inside wrapper, wherein the inside wrapper has a heat conductivity of $0.5 \text{ W} \cdot \text{K}^{-1} \cdot \text{m}^{-1}$ or more and the outside wrapper paper sheet has a heat conductivity of less than $0.5 \text{ W} \cdot \text{K}^{-1} \cdot \text{m}^{-1}$.

2. The cigarette according to claim 1, wherein the tobacco section exhibits a weight burn rate of 55 mg/min or more or a linear static burn rate of 5.0 mm/min.

3. The cigarette according to claim 1, wherein the inside wrapper paper sheet contains 0 to 0.5% by weight of a loading material.

4. The cigarette according to claim 2, wherein the inside wrapper contains 0 to 0.5% by weight of a loading material.

5. The cigarette according to claim 1, wherein the inside wrapper has an air permeability of 5 to 30 CORESTA units.
